

**BIRD•B•GONE**™  
INC.  
Professional Bird Control Products Since 1992

## Case Study

### Newport Beach Lifeguard Station

**Location:** Lifeguard station, Newport Beach, CA

**Bird Problem:** Birds landing on the lifeguard station roof were covering it in bird droppings. Other birds were landing on light posts and nearby building ledges.

**Product Installed:** Bird-B-Gone Polycarbonate Bird Spikes and the Bird Spider

**Product Details:**

- Polycarbonate bird spikes are used a physical barrier to block large birds from landing.
- The Bird Spider is a physical bird deterrent that uses motion to scare away pest birds.

Bird droppings covered the beach front lifeguard station for years.

Bird Spikes can be easily installed with adhesive, screws or tie downs.

Bird Spikes are U.V. resistant and meant for outdoor use.

A combination of spikes and bird spiders were used to keep gulls and pigeons off the roof.
