## Birds Netting Installed In Airport Hangar

**Location:** Ft. Smith, AR

**Bird Problem:** When birds congregated in an air hangar used to protect expensive equipment and aircraft, bird droppings quickly became a costly damage for the airport. Not only was the aircraft exposed to damaging bird feces but the airport wanted to protect the aircraft from becoming compromised by nesting materials.

**Product Installed:** Bird Net 2000™ Heavy Duty Netting

**Product Details:** Bird Net 2000™ is a heavy duty polyethylene netting used to prevent birds from accessing unwanted areas. Bird Netting is most effective in situations like this canopy when preventing birds from roosting or nesting.

The bird netting becomes nearly invisible when installed.

The bird droppings were the cause of expensive damages to the aircraft.

The bird netting was installed onto existing beams with girder clamps and straining wire.

The facility has been bird free, saving maintenance time and money.
