

CASE STUDY

Outdoor Storage Protected With Bird Netting

Location: Indianapolis, IN

Bird Problem: Due to birds nesting under an exposed docking area, bird droppings had accumulated on equipment compromising the stations functionality.

Product Installed: Bird•B•Gone® Bird Net 2000™

Product Details: Bird Net 2000™ is a heavy duty polyethylene netting used to block birds from unwanted areas. The storage facility not only needed to remove the pest birds but they also wanted to prevent them from returning to the location. Bird Netting was the perfect solution to physically exclude them from the building's overhang.

Birds nesting on I-beams were covering storage equipment with bird droppings.

Installing Bird Net will save time and money spent on weekly clean-up of bird droppings.

Bird Net 2000™ was installed to block birds from sitting on I-beams.

Zipper can be installed in bird netting to allow access to features such as light fixtures.
