

Superior Vent System Protection Versus Traditional Vent Guards

The DEFENDER Design Advantages

Built to Last & Perform

The Defender represents a major advance in design features that clearly outperform the old attempts at intrusion prevention.

Select the Defender for serious protection.

2 Models for Universal Application and Defense against Squirrels & Birds

The Defender	Traditional Vent Guards
Zinc coated steel with a powder coated finish stands the test of time.	Plastic vent covers deteriorate from UV rays.
Vertical bars allow lint to pass through while birds and squirrels cannot come in.	Cross bars block lint at a rapid rate, making the dryer vent far less efficient.
Metal cannot be broken off or eaten by various critters.	Plastic materials are susceptible to critter entry.
Hooded design allows for additional weather protection.	Accessible grates allow rain/snow to enter the covers which turns lint into a thick papier-mâché like barrier.
Powder coated color options help match the existing siding to maintain exterior aesthetics.	Standard white plastic often does not match and creates a dull, unsightly finish over time.
Various sizes cover 3", 4", 5", and 6" vents.	Standard sizes only cover 4" vents.
Numerous mounting options are available.	Single mounting method required.
Installs easily on all siding types.	Installs on limited amounts of siding materials.
Easily removable for duct cleaning and re-installation.	Plastic materials may fall apart upon re-installation.
Hides unsightly vents with hooded feature.	Unsightly vents remain visible.
Durable metal maintains form and function over time.	Softer plastics break, bend, warp, and crack over time.
Long lasting solution that doesn't need to be replaced.	Cheaper solution that is often replaced.

Select Protection that Won't Become a Problem
