

Effective, Humane Marine Bird Control

There's no denying that today's marinas and boats take a lot of abuse from pest birds. With their many lofty perching points, boats and marinas provide ideal places for waterfowl looking for a vantage point for their next meal. While this may be great for birds, it can create all sorts of problems for today's boat owners and marinas.

Bird Droppings and Nests Deface and Damage

The acidic nature of bird droppings can "eat" into most materials, including wood, metal, canvas, plastics and composites, even stonework.

A Costly Nuisance

Whether you own or manage a marina, or you own one boat or an entire rental fleet, dealing with pest birds can be a costly nuisance.

The good news is

that there are a number of effective and humane bird control measures available that can ease the pain in dealing with pest birds in and around boats and marinas.

Bird Spider 360°™

The wind powered Bird Spider 360°™ uses thin, wildly flailing arms to frighten birds away. These bird spiders come in 2-, 4-, 6- and 8-foot diameter for increasingly wider areas of deterrence. Made in the USA, the Bird Spider 360°™ features a UV-protected polycarbonate base to survive harsh waterfront weather.

Repeller 360°™

Wind powered so it can easily be placed where pest bird land most often, the Repeller 360° spins in the breeze to deter large birds such as gulls, pigeons, cormorants and crows from perching and loitering. Designed to catch the slightest breeze, the Repeller 360° has two "sails" mounted at opposite ends of a 6-foot stainless steel arm. Each sail has a reflective "bird predator" eye to intimidate birds.

Bird Spider® Sand Bag Base

Used to weigh down a Bird Spider 360°™ or Repeller 360°™ so they can stand alone. Each base weighs 8 lbs. and has eyelets around the outer ring for extra security.

Railing Mount

Ideal for attaching Bird Spider 360°™ or Repeller 360°™ to boat rails, pole fencing and similar applications, the Railing Mount easily adapts to railing sizes 1" to 1.86"

Bird Spider® Boat Base

Ideal for securing Bird Spider 360°™ or Repeller 360°™ to masts, spreaders and other areas. Easy to remove and reapply and comes with all necessary hardware.

Stainless Steel Bird Spikes

Ideal for harsh marine environments, Bird B Gone's Stainless Steel Bird Spikes provide anti-perching, anti-roosting protection for marinas, boats, lamp posts, signage and other elevated structures. The spiked strips won't allow birds to land or perch wherever they're installed. These durable, seaworthy bird spikes are made in the USA of stainless steel, with pins embedded in a UV-protected polycarbonate base.

For additional advice on how to effectively deter pest birds from boats, marinas and seaside businesses, consult an expert like the folks at Bird B Gone.
